This is UNEVALUATED

THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.  
 THE APPRAISAL OF CONTENT IS TENTATIVE.  
 (FOR KEY SEE REVERSE)

1. After the war many of the furnaces of the Jednosc steelworks, (formerly Laurahutte) in Siemianowice (Q51/Y77) were dismantled by the Soviet occupation army.
2. In 1949 a new tube mill was built at the Jednosc steelworks by the Innocenti firm of Italy. The electric installations, however, had not been completed by the end of 1953, so that the plant could not work to capacity. Between June and October 1953 the rectifier station was completed under the supervision of an Austrian specialist, who had local equipment and local workers at his disposal.
3. The production of the tube mill includes seamless steel tubes with a diameter of 15, 60 and 105 mm and a smaller quantity of welded steel tubes produced on an experimental basis.
4. According to the firm of Innocenti, the tube mill is to have a daily maximum output of 68 tons. However, by establishing two working shifts and one shift doing repair work, the capacity of the machines could be better utilized, so that a daily output of 80 tons could be achieved.
5. The plant has a galvanizing installation of its own. With a view to increasing tube production the construction of a new large workshop was started on the site where the furnaces had been located.
